

REACH

(Registration, Evaluation, Authorisation and Restriction of Chemicals)

REACH is the used abbreviation of the European Community Regulation on chemicals and deals with the registration, evaluation, authorization and restriction of chemical substances. The law entered into force on June 1st, 2007 and has been binding for all EU member states.

The aim of REACH is to improve the protection of human health as well as the environment through the possible risks of chemical substances. REACH also aims to enhance the responsibility of the chemical industry to review and define certain risks of chemical substances and advise the clients and users. The REACH system is based on the principle of own responsibility of the industry and within the region of validity, only those chemical materials may be brought to the market that have previously been registered.

The European Chemicals Agency (ECHA) issues a so-called "candidate list" naming the "hazardous substances". In accordance with the REACH directive, each supplier must identify the listed substances in their paperwork as soon as they take up a weight of more than 0.1 % of the overall product.

Based on supplier declarations we can assure that our products comply with the requirements of the REACH regulation in the current version and receptively do not contain substances of more than 0.1% by weight of the total product of the current "SVHC list" (status: January 2022).

ASLAN is still bound to inform you about possible risks with certain products. One will always find this information on the material safety data-sheets.

However, ASLAN products are not underlying a registration obligation report as to the REACH regulation. Given our current state of knowledge, it is therefore adequate to use our safety-data-sheets and no additional/special information is required. The films itself are classified as manufactures according to EU regulation 1907/2006 dated 18.12.06 (REACH VO) and therefore are not subject to registration.

For you as a customer it is therefore not applicable to review if special requirements or limitations have to be considered by raw materials used.

Please be aware that if at any point this should change, we will of course inform our clients immediately.
