

Very easy to use and durable too: **ASLAN** ReApply Series

Turn your kitchen door into a magnet receptive notice board, transform a window into a whiteboard, or make any surface writable. To date, this has only been possible if the substrate had been pretreated and the film permanently applied by a professional.

**But now all this is possible with our brand new
ASLAN ReApply series:**

The adaptable products from the **ASLAN ReApply series** are produced using a combination of the world renowned **ASLAN memo board films**. They are equipped with a revolutionary adhesive system and can be easily attached to smooth and slightly structured surfaces.

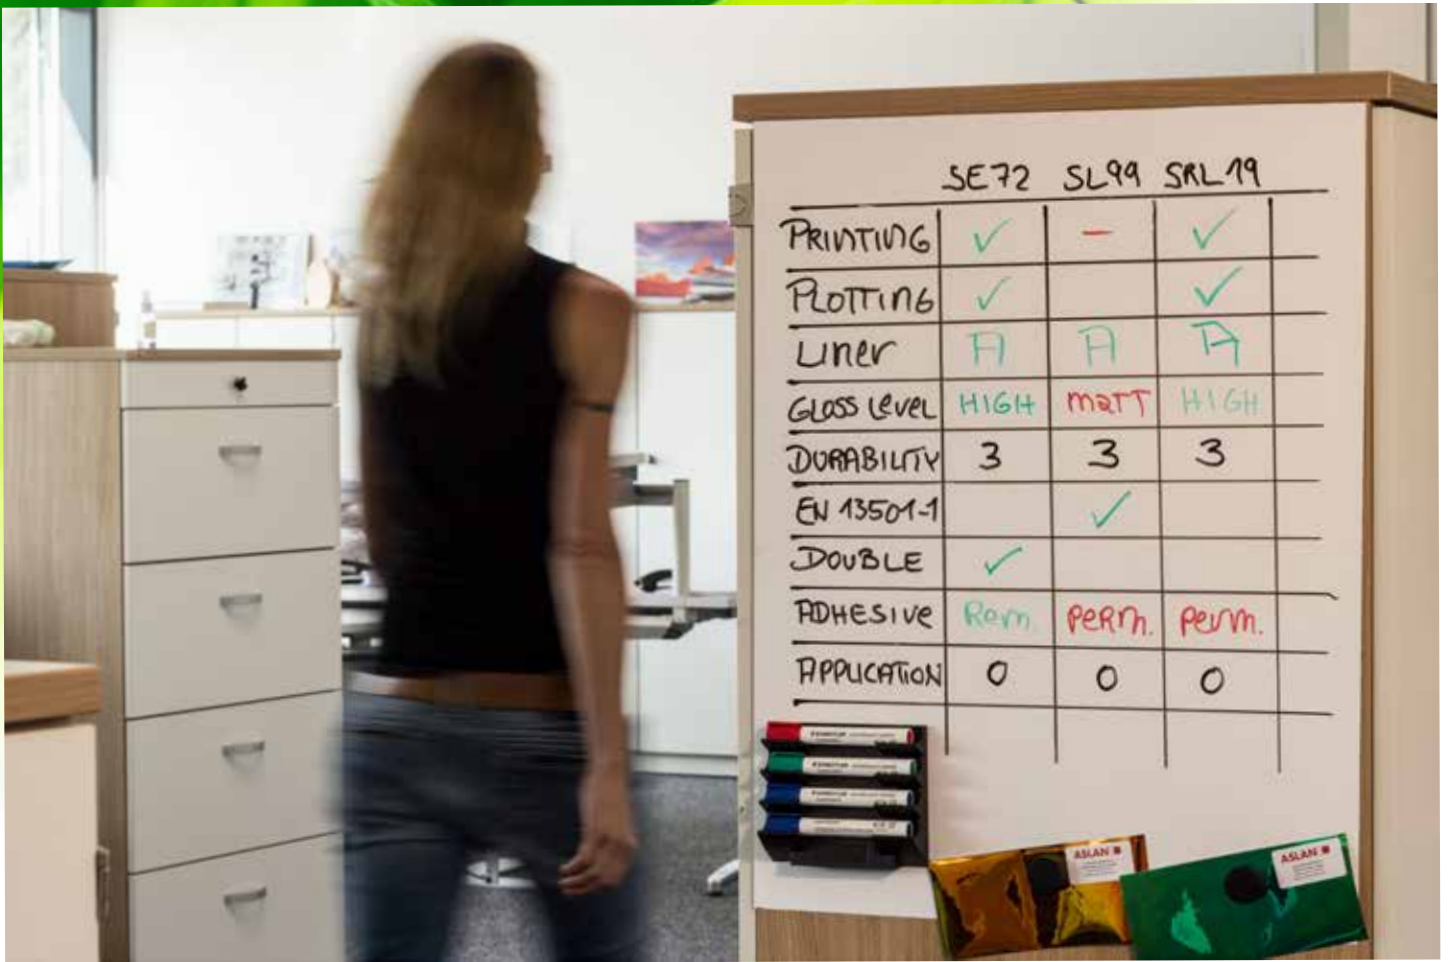

For example: glass surfaces, kitchen surfaces, doors, tiles etc. can be transformed into communication areas in next to no time and without any previous experience. They can be written on using whiteboard markers, blackboard pens or chalk and a number are even magnet receptive. If the adhesion of ASLAN ReApply to the substrate is too low, e.g. on matt and slightly structured surfaces, this can be increased by lightly spraying the back of the product with water.

If it's no longer needed, simply remove it, roll it up and store away for use another time.

Aren't
That
good news?
